DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitations "the capacitor" in line 6, "the capacitor" in line 7, and "the trigger output" in line 7. There is insufficient antecedent basis for these limitations in the claim.

Claim 5 recites the limitation "the electrical components" in line 12 and "said capacitor" in line 13. There is insufficient antecedent basis for these limitations in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Lewandowski.

The Lewandowski reference discloses a product container including a storage compartment 21 containing a personal care product (soap), a switch mechanism/lower portion 24, capacitors (38, 38', 38''), a device for releasing a sound output/trigger output 34, and a battery 35, the switch simultaneously dispensing the soap and activating the sound output for a fixed, predetermined time (see col. 1, lines 49-62).

Response to Arguments

Applicant's arguments filed 4/22/05 regarding the 102 rejection of claims 1-4 in view of Lewandowski have been fully considered but they are not persuasive. Applicant argues that the capacitors are not capacitively connected to the output device and do not electrically isolate the output from the battery. However, as shown in Figure 4, a portion of the circuit includes wiring that leads from the output to the battery via a capacitor, and thus it is the Examiner's position that the capacitor indeed is "capacitively connected" to the device and "electrically isolates" the battery from the output at least in the above-mentioned portion of the circuit.
